

Farming for a stronger, healthier Chilterns

Ideas and guidance to support your land, your business and nature recovery

Why this matters now

Nature in the Chilterns is under pressure. Bird and butterfly populations are declining, soils are under strain, and habitats are becoming fragmented, with some areas becoming less rich in wildlife than they used to be.

The Plan

The Nature Recovery Plan brings together the latest evidence and local knowledge to guide action across the landscape. It helps support LNRS priorities with recommendations for practical action on the ground, supporting, habitat creation and restoration, improving connectivity, and encouraging more sustainable land management.

What this means for you

By working with nature, you can improve soil health, build resilience to climate change, access funding opportunities and support long-term productivity.

We can help you get started – from identifying opportunities to connecting you with advice, support and funding.

Local Nature Recovery Strategy (LNRS)

Each area has an LNRS identifying priorities for nature recovery across Buckinghamshire & Milton Keynes, Oxfordshire, Hertfordshire and Bedfordshire.

Find your local LNRS map on the Nature Recovery page on our website.

National
Landscape**

What you can do

- Explore the LNRS map to identify opportunities for habitat creation and enhancement
- Use the Nature Recovery Plan to find priority habitats and actions
- Create new habitats and improve existing ones
- Connect habitats across boundaries
- Get in touch for advice, support and funding

Scan to explore the Nature Recovery Plan and find your local LNRS map
